

Diagram illustrating the geometry of the sky plane and the real orbit plane ($i = 0$).

The diagram shows a shaded rectangular region representing the sky plane. A dashed line labeled "Sight seen (perpendicular on the sky plane)" points from an eye icon towards the center of the sky plane. A solid line labeled "Orbita relativă (reală)" points to the center of the sky plane. A solid line labeled "Orbita aparentă" points to the center of the sky plane.

Inside the sky plane, a circular path is shown with several points marked. The center of the circle is labeled SA^* . The radius of the circle is labeled S^* . The path is labeled W at the top and U at the right.

Orbita relativă (reală)
Orbita aparentă
