

Graph Number D2.4: Solution 2

$\frac{M_{DM}}{r} (\times 10^8 \text{ Mo/kpc})$

$$\begin{aligned} \text{slope} &= \frac{\Delta y}{\Delta x} \\ &= \frac{(6 - 9) \times 10^8 \text{ Mo/kpc}}{(0.9 - 0.25)} \\ &= 0.1 \times 10^8 \text{ Mo/kpc} \end{aligned}$$

$\frac{M_{DM}}{r} \arctan\left(\frac{r}{R_0}\right)$
