

E

log (Spectral Radiance)

$T_2 > T_1$

--- T_1
— T_2

log λ

The graph displays two bell-shaped curves representing the spectral radiance of a black body at different temperatures. The horizontal axis is labeled 'log λ' and the vertical axis is labeled 'log (Spectral Radiance)'. A dashed blue curve represents temperature T1, and a solid orange curve represents temperature T2. The T2 curve is shifted upwards and to the right relative to the T1 curve, indicating that at a higher temperature, the total radiance is greater and the peak shifts towards longer wavelengths. The condition T2 > T1 is explicitly noted in the top right corner.
